# AFTERCARE RECOMMENDATIONS

Traviata provide a range of Special Cleaning Products to help you maintain your floor and ensure that no build-up of dirt will affect its allergy free and easy to clean surface.

## Normal Cleaning

- ⇒The Traviata Laminate Floor Sweeper is ideal for cleaning. Alternatively, sweep with a broom or use a slightly damp cloth.
- ⇒Never apply water directly to the floor.
- ⇒Never use abrasive cleaners.
- ⇒Periodically use a specially formulated Laminate Cleaner/Restorer to maintain the lustre and allergy free surface of your floor. Excessive water will damage the floor.
- ⇒Do not sand, varnish, polish or wax the floor as these treatments will affect the intrinsic properties of the laminate floor.

## Stain Removal

- ⇒Remove any stubborn stains, such as those caused by glue, paint, tar, chewing gum, permanent marker pens etc with formulated Stain Remover.
- ⇒If stains persist contact your nearest Traviata dealer.

## Other Maintenance Tips

- ⇒The use of felt pads under tables, chairs and cupboards is recommended.
- ⇒This makes them easier to move around and prevents scratching.
- ⇒Equip castors or rollers with soft threads. Replace any old, hard or sharp edged castors.
- ⇒Place drip trays under all plants.

## Features that occur in Laminate Flooring.

Due to the fact that the wood is a natural product it is also a living product. Wood therefore needs to contract and expand with changing climatic conditions. The expansion of wood in the length, width and height have certain tolerances allowed and specified by the E.P.L.F (European Producers of Laminate Floors) and S.A.W.L.F.A. (Southern African Wood and Laminate Flooring Association). These world wide accepted norms are as follows:

- ⇒Opening between panels 0.15mm to 0.20mm.
- ⇒Height difference between panels 0.10mm to 0.15mm.
